

# SCOREX

## ABOUT US

Cricket scoring, simplified.

**ScoreX is an Android cricket scoring application created to make live cricket scoring faster, clearer and easier to manage. From match setup to the final scorecard, ScoreX brings the essential scoring workflow into one mobile application.**

## Who We Are

We are the team behind ScoreX, an Android-based cricket scoring project focused on combining practical live scoring with useful match analysis. The application was developed around the real needs of a scorer: quick delivery entry, automatic statistics, clear innings information and an easy way to review the match later.

ScoreX is designed as a local-first application. The current version does not depend on a traditional database or cloud service for ordinary scoring. Match history, application settings and generated scorecard PDFs are handled using local Android/Java storage mechanisms.

## Our Vision

Our vision is to build a cricket scoring experience that feels simple during a live match but becomes powerful when the match is finished. A scorer should be able to concentrate on the game instead of manually calculating every statistic.

| LIVE                                                       | SMART                                                                    | CLEAR                                                         |
|------------------------------------------------------------|--------------------------------------------------------------------------|---------------------------------------------------------------|
| <b>Fast scoring</b>                                        | <b>Automatic stats</b>                                                   | <b>Better review</b>                                          |
| Record runs, extras and wickets directly during the match. | Keep batting, bowling, partnership and innings information synchronized. | Use scorecards, graphs, history and PDF export after scoring. |

## What ScoreX Offers

| FEATURE     | DESCRIPTION                                  |
|-------------|----------------------------------------------|
| Match Setup | Teams, overs, toss winner and toss decision. |

| FEATURE                | DESCRIPTION                                                                     |
|------------------------|---------------------------------------------------------------------------------|
| Live Scoring           | Normal runs, extras and wickets during an innings.                              |
| Special Scoring        | Wide, No Ball, Bye, Leg Bye and Run Out with completed runs.                    |
| Player & Bowling Stats | Batting, bowling, partnerships and over information.                            |
| Undo                   | Correct the most recent scoring action.                                         |
| Scorecard              | Detailed batting, extras, bowling, fall of wickets and partnership information. |
| Graphs                 | Runs per over, run rate and innings comparison with wicket markers.             |
| Match History          | Locally save, open and delete completed matches.                                |
| PDF Scorecard          | Generate and share a permanent scorecard document.                              |
| Settings               | Application/scoring preferences, saved PDFs, history and About information.     |

## Our Development Approach

ScoreX is structured around Android activities for the user interface and a dedicated scoring/model layer for match state. The scoring logic is designed to keep delivery events connected to player, bowler, partnership, over and innings information.

### Technology

| ANDROID            | JAVA               | LOCAL-FIRST               |
|--------------------|--------------------|---------------------------|
| Mobile application | Java 11 compatible | Local match & PDF storage |

## Where We Want to Go

The current ScoreX foundation can be extended in future versions with cloud backup, online score sharing, player and team profiles, tournament management, multi-device collaboration and richer cricket analytics.

**Built for the game. Designed for the scorer.**

SCOREX • Cricket Scorer • Version 1.0
